IN THE CLAIMS

Cancel Claims 8 and 9.

Please add the following new claims.

Claim 23 (New) A head mount image display device wherein a liquid crystal display panel and enlarging optical system are housed in a frame and wherein an image generated on the liquid crystal panel is visible in a field of view in front of said frame through the enlarging optical system, said device comprising:

- an input device for inputting signals, with a positional sensor to detect positions of an operator's hands and fingers;
- a key assignment means for assigning input keys to information regarding the positions detected by said positional sensor;
- an arithmetic unit for performing arithmetic operations based on data corresponding to an input key assigned by said key assignment means;
- an image synthesizing means for synthesizing a virtual key board display screen for displaying input keys to be assigned by said key assignment means, and an arithmetic operation result display screen for displaying a result of the arithmetic operation performed by said arithmetic unit, so as to display both said display screens side by side on one screen.

Claim 24 (New) An image display device according to claim 23, comprising a
